

## PRESSES THE RIGHT BUTTONS

JSP has scooped the BSIF Award for Product Innovation in the BSIF Safety Awards 2014 for its PressToCheck.

Enabling instant face-fit checking of JSP's lightweight Force 8 half mask, the Press To CheckP3 particle filter technology is claimed to be a big step forward in ensuring respirators are correctly worn and increasing their effectiveness each and every time they are used.

It takes away the time and tedium of checking a mask's fit every single time it is put on and ensures daily face-fit reassurance for all.

JSP technical director Matthew Judson said: "We very much welcome this recognition of the work JSP has carried out to allow the worker to check the fit of their respiratory protective equipment with ease."
